## Greeting of the Conference Chairmen and the Organizers

For the first time, three universities, Friedrich Schiller University Jena, Ilmenau University of Technology and Ernst Abbe University of Applied Sciences Jena, supported by their partner medways, the medical technology industry network, jointly host an annual conference of the German Society for Biomedical Engineering (DGBMT) within VDE. Basic research, applied research, clinical application and the expertise for the sustainable exploitation of scientific results as products and procedures for the global market are located in an outstanding manner in the university site of Jena.

Building on a longstanding tradition of co-operation between science and industry medical technology has established itself as a sound and sustainable sector in Thuringia. In addition to the global players it is the many young companies in the fields of medical chemical analysis, laser engineering, implant technology and medical instruments and devices which benefit from the excellent range of possibilities that are available at the site.

We would like to invite medical experts, engineers and scientists for an intensive and creative technical dialogue in this environment where the most recent scientific results will be discussed and tested for their suitability in practice. The annual conference will focus on maintaining existing contacts and initiating new co-operations as well as holding talks in a pleasant atmosphere.

We look forward to meeting you at the BMT 2012 – 46th annual conference of the German Society for Biomedical Engineering in Jena.

Prof. Dr. Jens Haueisen (conference chair)

Prof. Dr. Andreas Voss (conference chair)

Prof. Dr. Herbert Witte (conference chair)

In Biomedical Engineering scientists, engineers, computer scientists and doctors cooperate in an interdisciplinary way. The annual conference of the German Society for Biomedical Engineering (DGBMT) within VDE is the ideal setting for this interdisciplinary cooperation. From 16 to 19 September 2012, the leading experts in the field of Biomedical Engineering at universities, research institutes and industrial companies meet at Friedrich Schiller University Jena to present the latest results in research and development, discuss recent trends in Biomedical Engineering and initiate new projects.

The 46th annual conference of the DGBMT has become the largest German language BMT conference offering a wide range of fields of medical technology. More than 550 conference papers and posters and 19 scientific tracks cover a wide range of topics in research and development. At this year's conference, focal topics are biosignal processing, implants, modelling and simulation as well as imaging. The programme is rounded off by special sessions, e.g. on intelligent implants, BMBF and EU sponsoring and the VDE MedTech Tutorial. As in the previous years, the BMT will once again be accompanied by the Young Forum BMT.

I wish us all a successful conference and a most enjoyable stay at the Friedrich Schiller University Jena.

**Prof. Dr. med. Dipl.-Ing. Thomas Schmitz-Rode**

Chairman of the German Society for Biomedical Engineering (DGBMT)  
within VDE

## Organizers and Conference Venue

### German Society for Biomedical Engineering (DGBMT) within VDE

The DGBMT promotes co-operation between scientists, engineers and physicians in the fields of research, development, application and teaching. It supports the exchange of knowledge between various disciplines of biomedical technology and seeks to accelerate the transfer of new technologies into medical application.

### Ernst Abbe University of Applied Sciences Jena

The largest university of applied sciences in Thuringia offers scientifically based and practice-oriented studies in eight departments of engineering, business administration and social sciences.

► [www.fh-jena.de](http://www.fh-jena.de)

### Friedrich Schiller University Jena

Rich in tradition, Friedrich Schiller University Jena offers a wide range of more than 130 fields of study. There are programmes with different degrees as well as postgraduate programmes and continuing education.

## Open Meetings of the DGBMT Technical Committees

The technical and scientific work of the German Society for Biomedical Engineering (DGBMT) within VDE is carried out by its **technical committees and working groups**.

Here,

- doctors, engineers and scientists from
- hospitals, research institutes and companies

cooperate interdisciplinary and transdisciplinary. Work contents range from

- the exchange of knowledge and networking to
- planning and implementing events and
- drawing up studies and position papers.

#### Guests are cordially invited:

Take the opportunity to participate in an intensive technical dialogue at the meetings of the DGBMT Technical Committees taking place during the BMT 2012 in Jena.

The **dates** for the meetings of the technical committees are listed in the current overview in your conference documents.

18-09-2012, 17:00 – 18:30 h, Room HS4, ground floor

**VDE MedTech experts provide information about the latest trends in the fields of research, standardization, efficient hospitals as well as testing and certification.**

The conference fee includes admission to the VDE MedTech Tutorial.

**Programme:**

Language: German

Chair & Moderation:

Cord Schlotelburg, DGBMT within VDE, Germany

17:00 **Biomedical Engineering in Germany:  
Competence, Technology Transfer, Financing**  
*Cord Schlotelburg, VDE, Germany*

17:20 **News from Standardization: Alarms and  
Usability**  
*Klaus Neuder, VDE DKE, Germany*

17:40 **Blues Hospital: Efficient, Quality Optimized  
and Energy Efficient Processes in Hospitals**  
*Johannes Dehm, VDE, Germany*

18:00 **Certification of Processes: Sustainability and  
Software**  
*Michael Bothe, VDE Institute, Germany*

18:20 **Discussion**

18:30 **End of session**

**VDE**, the Association for Electrical, Electronic & Information Technologies is one of the largest technical and scientific associations in Europe with more than 36,000 members. We are headquartered in Frankfurt am Main, and are represented in Berlin and Brussels as well as with 29 branch offices throughout Germany.

Biomedical Technology (BMT) / Biomedical Engineering is a key topic of the VDE commonly supported by the DGBMT, the DKE\* and the VDE Testing and Certification Institute.

## Intelligent implants: Clinical research & approval

### Programme:

Chairs:

Johannes Dehm, VDE, Germany  
Cord Schlötelburg, DGBMT within VDE, Germany

- 09:30 **The technology navigator for intelligent implants – Yellow pages for developers**  
*Klaus-Peter Hoffmann, Fraunhofer Institute for Biomedical Engineering & IBMT, Germany*
- 10:00 **Clinical trials with intelligent implants**  
*Xina Graehlert, Technical University of Dresden, Germany*
- 10:30 **Approval of intelligent implants**  
*Hartmut Ritscher, TÜV Product Service GmbH, Germany*

### BMBF accompanying research on intelligent implants:

The German Society for Biomedical Engineering (DGBMT) within VDE coordinates the BMBF (Federal Ministry of Education and Research) sponsored accompanying research project "Intelligent Implants", the purpose of which is to overcome obstacles to innovation on this subject faced by the 12 joint projects sponsored by the BMBF.

Intelligent implants are highly complex systems made up of sensors, actuators and signal processing. They have already become an indispensable part of modern therapy and are among the most demanding medical products at all. The funding measure comprises eight application-oriented cooperative projects coordinated by medical technology companies. In addition, four scientific projects are funded where central issues are examined in the development and enhancement of key components for implants. The DGBMT has published two position papers on "bio-implants" and "theranostic implants". The position papers contain a comprehensive discussion of the state of the art, identify the need for faster translation into clinical application and give recommendations for action in order to improve the framework conditions for innovation.

Medical implants are a main topic at the "BMT" annual conferences of the DGBMT with a multitude of scientific papers.

**16-09-2012 at 9:00 h, University Campus**

The Young Forum BMT addresses its initiative to students, doctoral candidates and young professionals interested in Biomedical Engineering and cordially invites them to take part in an exchange of information.

9:00 – 11:30 h

**Guided tour of the Institute of Photonic Technology (IPHT)**

Meeting point: Albert-Einstein-Str. 9, 07745 Jena

13:00 – 15:00 h

**Tutorial and Workshop**

“Presenting and communicating – truly professional”

15:15 – 16:45 h

**Panel Discussion**

“Degree in BMT – what now?”

BMT graduates working in industry and science talk about their careers and discuss goals, experiences and career opportunities.

Starting 17:00 h

**Get-together “Young Forum BMT 2012”**

Participation fee: 15 € (including food)

Online registration: [www.vde.com/youngbmt](http://www.vde.com/youngbmt)

**17 to 19-09-2012, Trade exhibition**

The Young Forum BMT will present itself together with the DGBMT within VDE and the VDE YoungNet at the trade exhibition of the 46th DGBMT annual conference. Get informed interactively about the opportunities for studying BMT and the requirements for BMT graduates.

**17-09-2012, 15:00 – 16:30 h, Room HS5, ground floor**

Session together with the expert committee “Training and further education - BMT in your studies”.

Young researchers discuss with experienced scientists on their practical experience.

**A separate registration for the BMT 2012 is required for a visit to the exhibition and the participation in the conference programme.**

**Further Education Event for Doctors at the BMT 2012**

Certification of the lecture programme of the BMT 2012 – 46th DGBMT annual conference is granted by the Medical Association of Thuringia based on the current further training regulations of the Medical Association and the uniform assessment criteria.

According to **category B**, the conference is certified as an all-day or half-day event with parallel parts of event.

The following number of further **training points (FP)** can be awarded per day of the event:

17-09-2012 – 6 FP

18-09-2012 – 6 FP

19-09-2012 – 6 FP

Registration numbers: 45796 - 45798

At the end of the respective conference day you will receive a **certificate of attendance** issued in your name.

The organizer is responsible for the transmission of uniform numbers of further training for participants to the electronic information distribution list.

Participants are requested to independently register the further training points (FP) with the Medical Association of Thuringia after the conference.

The Cluster Medical Technology North Rhine-Westphalia (NRW) on the BMT 2012 in Jena

Since its start in August last year, the Cluster Medical Technology NRW puts a lot of effort in the efficient use and further development of the strengths in NRW's medical technology branch. This includes support and assurance in growth and employment.

The aim of the cluster work is to upgrade the provision of medical services and care of the citizens and to foster the scientific profile of NRW. Additionally, the research and development in the area of medical technology should be driven by the users' needs.

The Cluster management aims at stimulating innovations, creating cooperation across the borders and initiating an intensive collaboration between the involved persons in different steps of innovation. This goal should be reached through constructive networking of all parties involved.

The Cluster Medical Technology in NRW will be present with an own stand on the BMT in Jena. We are looking forward to getting in touch with you and to answer your questions regarding cooperation and cross-border projects as well as to give you an overview of the situation of medical technology in North Rhine-Westphalia.

**Keynote 1****8:30 In-vivo Human Molecular Imaging Using PET-MRI Fusion Imaging Technology**

Zang-Hee Cho (Gachon University of Medicine and Science, Korea)

Brain dedicated PET-MRI using High resolution HRRT-PET and Ultra High Field 7.0T Magnetic Resonance Imaging (MRI) and their applications to Brain Research, Medicine and Biology will be discussed. Among the interesting topical areas, high resolution brain PET(HRRT) and the ultra high field MRI (7.0 T) will be highlighted. Increased field strength in MRI in the last few years has provided a large amount of experiences in both imaging of anatomy to functional activities of our brain. With high field MRI, such as the 7.0T MRI, one can now visualize the substructures of the thalamus and brainstem in-vivo as well as tractography hitherto unable to do with existing MRI systems. Together with molecular imaging using Positron Emission Tomography (PET), that is the brain dedicated PET-MRI fusion system using new brain dedicated Ultra high field 7.0T MRI developed recently, now, it is possible to visualize molecular mechanisms quantitatively in our human brain in-vivo. This new ultra-high resolution brain imaging tool can facilitate understanding of our human BRAIN, therefore, the treatment, surgery, and rehabilitation of various neurological diseases such as Parkinson's and Alzheimer's diseases.

**Keynote 2****14:00 Bioelectric environments for stem cell derived neurons and cardiomyocytes***Jari Hyttinen (Tampere University of Technology, FI)*

Human embryonic (hESC) and recently human induced pluripotent stem cells (hiPSC) provide means to produce most human cell types and moreover hiPSC provide means to get patient specific cells and tissues. Our objective is to develop novel methods to produce and assess functional neuronal cells and cardiomyocytes from human stem cells. These cells are urgently needed to treat neurological disorders, traumas and cardiac failure in humans. Moreover, these cells offer a completely new opportunities for disease and drug discovery platforms for personalized therapy. Hence, new approaches to produce functional cells and moreover methods to analyse the functionality of the cells are well warranted. Bioelectric measurements offer a label free non-invasive way to assess the functionality of neuronal cells and cardiomyocytes. In vitro cultivation system integrated microelectrode array (MEA) technology allows the measurement of electrical signalling activity at the cell, tissue, and network-level. The electrical activity of cardiomyocytes and neuronal cells can be measured while the cellular network develops in vitro on a growth plate with embedded recording and stimulus electrodes. Moreover, we have investigated and assembled biomimetic cell culture environments with integrated biomaterials, microfluidics of medium exchange, pH, oxygen, temperature measurements into the in vitro microelectrode arrays, producing multimodal biomimetic active platform for stem cell differentiation and functional assessment and developed tools. Using these environments proof of the hESC derived active neuronal networks and hiPSC derived cardiomyocytes with patient specific ion channels mutations were investigated. Our next goal is to investigate ways to expand the technology to three dimensional bioelectric culturing environments with multi-type of cells in controlled 3D culture system. For example, in a new FP7 FET-Open project 3DNeuroN, the technology is expanded to 3D neuronal cultures featuring glia and neuronal cells with layered structure of human brain integrated with novel 3D MEA electrode scheme providing new window for neuronal and brain development and ICT interaction.

**Keynote 3****08:30 Information from Graphical Analysis of HRV**

*Phyllis K. Stein (Washington University School of Medicine, USA)*

Heart rate is controlled by a combination of sympathetic and parasympathetic inputs to the sinoatrial node and these inputs are regulated, in turn, by multiple feedback loops so that in a healthy person cardiac output is matched on a beat-to-beat basis with the demands of the body and is capable of changing very quickly in response to sudden changes. This has led to a simplistic assumption that numbers derived from intervals between heart beats (i.e., heart rate variability or HRV) always capture cardiac autonomic function only and that more is always healthier. Thus, calculations are usually made without any examination of the underlying patterns in the data. In this talk, I will cover various graphical methods for identifying normal and abnormal heart rate patterns that provide a more accurate way to examine and interpret HRV and also provide additional important clinical information, especially during sleep. These examples will be based on 24-hour Holter recordings and also on ECGs from overnight sleep studies, but even when HRV is calculated from short-term recordings, some graphical validation of the recordings should be performed to validate the data. The following graphical analyses will be covered in detail: Information from heart rate tachograms; information from 5-min averaged heart rate and HRV patterns; information from Poincaré plots; information from power spectral plots and integrating information from multiple HRV plots. Special emphasis will be placed on what normal patterns look like and how abnormal patterns in these different modes affect time domain, frequency domain and non-linear HRV analysis.

**Keynote 4**

- 14:00 Transcatheter Heart Valve Replacement: Technical Innovations in the Interest of the patient.**  
*Hans Reiner Figulla (University of Jena, DE)*

2002 wurde erstmals bei einem Erwachsenen mit Aortenklappenstenose perkutan, d.h. durch Punktions der Leistengefäße, mittels eines Katheters die Implantation einer Aortenklappe vorgenommen (TAVI). Nach weiteren technischen Verbesserungen wurden 2007 zwei Herzklappenmodelle (Cribier Edwards, CoreValve) CE-zertifiziert und in den Europäischen Markt eingeführt. Das Verfahren, welches für die klassische Operation bei Patienten mit hohem OP-Risiko bei alten Patienten als Alternative zur Verfügung steht, erfreut sich großer Akzeptanz insbesondere in Deutschland, so dass Deutschland gegenwärtig der weltweit größte Markt ist. 2011 wurden ca. 4.000 perkutane Aortenklappenimplantationen in Deutschland durchgeführt, d.h. 28% aller Aortenklappeneingriffe. Randomisierte Studien zeigen, dass dies TAVI-Verfahren bei Hochrisikopatienten auch nach drei Jahren der Operation ebenbürtig ist. Neue Studien sind konzipiert, um das TAVI-Verfahren alternativ zur klassischen Operation auch bei Patienten zu prüfen, die ein niedriges Operationsrisiko aufweisen. 2011 sind zwei weitere Herzklappenmodelle in den Europäischen Markt eingeführt worden, wobei insbesondere die in Jena konzipierte Klappe (JenaValve) sich großer Akzeptanz bei der Applikation durch die Herzspitze erfreut. Es ist davon auszugehen, dass technische Verbesserungen und die Ergebnisse der o.g. weiteren Studien die klassische chirurgische Operation durch die perkutane Aortenklappenimplantation in den nächsten Jahren abgelöst wird.

Aufgrund des Durchbruchs mit perkutanen Klappen im Bereich der Aortenposition gibt es weltweite Forschungsaktivitäten, um die perkutanen Klappen auch in anderen Positionen des Herzens einzubringen. In Jena wurden die weltweit ersten heterotopen Trikuspidalklappenimplantationen durchgeführt, Forschungsprojekte zur Entwicklung einer perkutanen implantierbaren Mitralklappe sind im Gang. Perkutane Implantationen zum Ersatz der Pulmonalklappe sind ebenfalls in den Bereich der klinischen Praxis eingezogen, sie erübrigen bei voroperierten Patienten die Re-Operation.

Die klinischen Studien zeigen, dass mittels perkutan implantierbaren Herzklappen, die den Patienten weniger belasten, neue Verfahren zur Verfügung stehen, die eine schnellere Rehabilitation und geringere Risiken aufweisen. Die großen Erfolge dieser revolutionären Verfahren wurden möglich durch technische Entwicklungen von Kathetern, Stents, Herzklappen, Gefäßzugangsschleusen, verbesserter Röntgenbild-und Ultraschallbildtechnik und Teambildung zwischen Kardiologen und Herzchirurgen.

*Tilmann Sander-Thoemmes (Physikalisch-Technische Bundesanstalt, DE)*
- F2 Relation between neonatal behavioral states and heart rate variability**  
*Peter Van Leeuwen; Daniel Geue; Silke Lange; Anita Klein; Anja Franzen (Grönemeyer Institute of Microtherapy, DE); Klaus Heller (Marienhospital Witten, DE); Dietrich Grönemeyer (Grönemeyer Institute of Microtherapy, DE)*
- F3 ECG-Multichannel Frontend for Quick Stimulus Response Based on FPGA with Implemented Real-Time, Online QRS Detection Algorithm**  
*Paul Fritzsche; Sven Niemöller; Daniel Laqua; Peter Husar (Ilmenau University of Technology, DE)*
- F4 Influence of interior cerebrospinal fluid compartments on EEG source analysis**  
*Benjamin Lanfer (Institute for Biomagnetism and Biosignalanalysis & BESA GmbH, DE); Isabella Paul-Jordanov; Michael Scherg (BESA GmbH, DE); Carsten H. Wolters (University of Münster, DE)*
- F5 Circumferential Pacing Reveals Microstructure of Cardiac Tissue Preparations from Small Animals – An Approach to Classify Microfibrosis**  
*Robert Arnold; Thomas Wiener; Michaela Schwarz; Ernst Hofer (Medical University Graz, AT)*
- F6 Quality evaluation of a pediatric ECG database for assessment of arrhythmia detection algorithms in Automated External Defibrillators**  
*Patricia Radon; Uwe Steinhoff (Physikalisch-Technische Bundesanstalt, DE); Gero von Wagner; Norbert Kraft (Metrax GmbH, DE)*
- F7 Evaluation of QRS detection algorithm implemented for mobile applications based on ECG data acquired from sensorized garments**  
*Daniel Tantinger; Sven Feilner; Daniel Schmitz; Christian Weigand; Christian Hofmann; Matthias Struck (Fraunhofer Institute for Integrated Circuits IIS, DE)*
- F8 Feedback Control of the Electrical Stimulation induced Muscular Recruitment Determined by the Evoked Electromyogram**  
*Christian Klauer (Technische Universität Berlin, DE); Jörg Raisch (Technische Universität Berlin & MPI for Dynamics of Complex Technical Systems, DE); Thomas Schauer (Technische Universität Berlin, DE)*

- F9 Power Management Techniques in Wireless Sensor Networks**  
*Kai Becher (Fraunhofer Institute for Biomedical Engineering IBMT, DE); Sven Dussa (Karlsruhe Institute of Technology, DE); Roman Ruff; Klaus-Peter Hoffmann (Fraunhofer Institute for Biomedical Engineering IBMT, DE)*
- F10 Automatic analysis of systolic, diastolic and mean blood pressure of continuous measurement before, during and after sleep arousals in polysomnographic overnight recordings**  
*Dennis Lerch; Reinhold Orglmeister (TU Berlin, DE); Thomas Penzel (Charité - Universitätsmedizin Berlin, DE)*
- F11 Energy-Efficient Real-Time Compression of Biosignals**  
*Richard George (Hochschule für Technik und Wirtschaft des Saarlandes, DE); Josep Cardona; Roman Ruff; Klaus-Peter Hoffmann (Fraunhofer Institute for Biomedical Engineering IBMT, DE)*
- F12 ROC-testing of a spike sorting algorithm**  
*Christopher Doerr (Technische Hochschule Mittelhessen, DE); Dirk Hoehl; Uwe Thomas (Thomas RECORDING GmbH, DE); Thomas Schanze (Technische Hochschule Mittelhessen, DE)*
- F13 Decoding finger movements from ECoG signals using Empirical Mode Decomposition**  
*Mehrnaz Hazrati (University of Luebeck, DE); Ulrich G. Hofmann (University of Freiburg, DE)*
- F14 LineLORETA: A method for linear source reconstruction based on EEG and MEG data using functional-anatomical similarity priors**  
*Mirco Fuchs (Leipzig University of Applied Sciences, DE); Burkhard Maess (Max Planck Institute for Human Cognitive and Brain Sciences, DE); Thomas Knösche (MPI Leipzig, DE)*
- F15 Patient Adaptive Neurofeedback for ADHD Therapy**  
*Tino Schmidt (Technical University Dresden, DE); Dietmar Henrich (Technical University Dresden & Lausitz University of Applied Sciences, DE)*
- F16 Human computer interface with online brute force feature selection**  
*Matthias Mend (University of Applied Sciences Wuerzburg-Schweinfurt & Institute of Medical Engineering, DE); Walter Kullmann (University of Applied Sciences Wuerzburg-Schweinfurt, DE)*

- F17 Synchronized measurement of peripheral physiological signals**  
*Daniel Matthes; Patrick Frenzel; Mirco Fuchs (Leipzig University of Applied Sciences, DE)*
- F18 Is the MS Kinect suitable for motion analysis?**  
*Immanuel Weber (Koblenz University of Applied Sciences, DE); Joshua Meskemper; Johannes Koch; Kim Friedl; Kai Heinrich (German Sport University Cologne, DE); Ulrich Hartmann (Koblenz University of Applied Sciences, DE)*
- F19 Food Intake Activity Detection Using an Artificial Neural Network**  
*Sebastian Päßler (Fraunhofer IPMS & Dresden University of Technology, DE); Wolf-Joachim Fischer (Fraunhofer IPMS, DE)*
- F20 Applanation Tonometry for Determining Arterial Stiffness**  
*Ying Zhao; Walter Kullmann (University of Applied Sciences Würzburg-Schweinfurt, DE)*
- F21 A Low-cost System for Recording Auditory Brainstem Responses**  
*Thomas Just (Ilmenau University of Technology, DE)*
- F22 A System for the Online Reconstruction of Distributed Sources from EEG and MEG data**  
*Mirco Fuchs (Leipzig University of Applied Sciences, DE); Thomas Knösche (MPI Leipzig, DE); Burkhard Maess (Max Planck Institute for Human Cognitive and Brain Sciences, DE)*
- F23 Fetal auditory evoked cortical responses development by fetal MEG measurements: influences on the responses latency by the gestational age, behavioral states and steroids treatment**  
*Uwe Schneider (Friedrich Schiller University, Jena, DE); Liviu Moraru; Daniel Wiegand (Jena University Hospital, DE); Samuel Nowack (Friedrich Schiller University, Jena, DE); Ekkehard Schleußner (Universitätsklinikum Jena, DE); Dirk Hoyer (Friedrich Schiller University, DE)*
- F24 Autonomic rhythms in the human fetus studied by short and long term correlations in fetal heart rate patterns**  
*Uwe Schneider; Ulrike Wallwitz; Anja Rudolph (Friedrich Schiller University, Jena, DE); Florian Tetschke; Stephan Bauer; Ekkehard Schleußner (Jena University Hospital, DE); Dirk Hoyer (Friedrich Schiller University, Jena, DE)*

**H2 Chip-on-the-Tip Endoscope with flexible Tip**

*Sebastian Schlegel; Bastian Blase; Daniel Brüggemann; Florian Bühs; Robert Dreyer genannt Daweke; Martin Kelp; Heinz Lehr; Stefan Oginiski (Technical University Berlin, DE)*

**H3 NIR spectroscopic analyses of chemical osteoarthritic cartilage models**

*Sophie Zierbock (Friedrich-Schiller-University Jena, DE); Holger Plettenberg (Arthrospec GmbH, DE); Stephanie Liebold; Martin Hoffmann (fzmb GmbH, DE); Michael Schmitt (Friedrich-Schiller-Universität Jena, DE); Jürgen Popp (Institut of Photonic Technology Jena, DE)*

**H4 Natural landmark tracking using triangle-based optical flow**

*Sven Friedl (Fraunhofer Institute for Integrated Circuits IIS, DE); Eugen Herdt (HS Regensburg, DE); Markus Kondruweit (University Hospital Erlangen, DE); Thomas Wittenberg (Fraunhofer Institute for Integrated Circuits IIS, DE)*

**H5 Quantitative rigidity evaluation during deep brain stimulation surgery - a preliminary study**

*Simone Hemm-Ode (University of Applied Sciences Northwestern Switzerland & School of Life Sciences, CH); Dagmar Gmünder; Ashesh Shah (University of Applied Sciences Northwestern Switzerland, CH); Miguel Ulla; Jean-Jacques Lemaire; Jérôme Coste (CHU Clermont-Ferrand, Hôpital Gabriel Montpied, FR)*

**H6 Correlation between laser Doppler measurements and anatomy during deep brain stimulation surgery**

*Simone Hemm-Ode (University of Applied Sciences Northwestern Switzerland & School of Life Sciences, CH); Karin Wårdell (University of Linköping, SE)*

**H7 Ballistic Pain Therapy Devices: Measurement of Pressure Pulse Parameters**

*Friedrich K.W. Ueberle; Abtin Jamshidi Rad (University of Applied Sciences Hamburg, DE)*

**H8 Laryngoscopic Image Stitching for View Enhancement and Documentation - First Experiences**

*Maria Schuster (University Munich, DE); Tobias Bergen; Christian Münzenmayer (Fraunhofer IIS, DE); Maximilian Reiter (University Munich, DE); Sven Friedl; Thomas Wittenberg (Fraunhofer IIS, DE)*

**Posters****Track I****Clinical Engineering****I1 Can ferromagnetic metal detectors improve MRI safety?**

*Andreas Heinrich; Felix Gütter; Urte Jäger; Ulf Teichgräber (University Hospital Jena, DE)*

**I2 MR-Compatible Servo Drive - First Results**

*Peter Pott; Andreas Hiemstra; Helmut F. Schlaak (Technische Universität Darmstadt, DE)*

**I3 Left atrial and left ventricular conduction delay by transesophageal electrocardiography with hemispherical electrodes in sinus rhythm cardiac resynchronization therapy**

*Matthias Heinke (University of Jena, DE); Bruno Ismer (Offenburg University of Applied Sciences, DE); Helmut Kuehnert (University of Jena, DE); Tobias Heinke (Siemens AG Healthcare Sector, Rudolstadt, DE); Ralf Surber; Dirk Prochnau; Hans Reiner Figulla (University of Jena, DE)*

**Posters****Track J****Ergonomics and Risk Management****J1 Risk Management: Integration of a passive UHF-RFID system in medical environment**

*Ziad Mabrouk (Münster University of Applied Sciences & Münster University, DE); Yue Ying; Uvo M. Hölscher (Münster University of Applied Sciences, DE)*

**J2 Acoustic noise control during auditory fMRI using a DSP system - first initial *in vivo* results**

*Daniel Güllmar; Markus Hädrich; Jürgen R. Reichenbach (Jena University Hospital, DE)*

**Posters****Track K****Home health care and AAL****K1 Time Synchronization Protocol in Wireless Sensor Networks**

*Kai Becher; Roman Ruff; Klaus-Peter Hoffmann (Fraunhofer Institute for Biomedical Engineering IBMT, DE)*

**Posters****Track L****Clinical and Ambulatory Monitoring****L1 Development of a wearable and wireless, modular, multichannel, EEG-System utilising dry-electrodes for long time monitoring**

*Unmesh Ghoshdastider; Christian Lange; Reinhard Viga (University of Duisburg-Essen, DE); Anton Grabmaier (Fraunhofer IMS, DE)*

**L2 Illusory Hand Ownership Induced by an MRI Compatible Immersive Virtual Reality Device**

*Felix Bach; Huseyin Kemal Çakmak; Heiko Maaß (Karlsruhe Institute of Technology, DE); Robin Bekrater-Bodmann; Jens Foell; Martin Diers; Jörg Trojan; Xaver Fuchs; Herta Flor (Central Institute of Mental Health, DE)*

**L3 Web Service-based presentation of vital signs on mobile devices**

*Carola V. Nitz (Universität zu Lübeck, DE); Stefan Schlichting (Drägerwerk AG & Co. KGaA, DE); Stephan Pöhls (Dräger Medical GmbH, DE); Ulrich G. Hofmann (University of Freiburg, DE)*

**L4 Multi-radio wireless sensor node for mobile biomedical monitoring**

*Krzysztof Piotrowski; Steffen Ortmann; Peter Langendoerfer (IHP GmbH, DE)*

**L5 Microfluidic device for fast on-site biomedical diagnostic on the example of lithium analysis in blood**

*René Sewart; Claudia Gärtner (Microfluidic ChipShop GmbH, DE); Richard Klemm (Fraunhofer Institut für Angewandte Optik und Feinmechanik, DE); Sebastian Schattschneider; Holger Becker (Microfluidic ChipShop GmbH, DE)*

**L6 Quantification of nasal respiratory flow by tracheal sound analysis**

*Keywan Ali Sohrabi (ThoraTech GmbH, DE); Denise Basu (Philipps-University Marburg, DE); Florian Schudt; Michael Scholtes; Oskar Seifert (Technische Hochschule Mittelhessen, DE); Ulrich Koehler (Philipps-Universität Marburg, DE); Volker Gross (Technische Hochschule Mittelhessen, DE)*

**L7 Accelerometer Sensor System for Continuous Determination of Systolic Time Intervals**

*Sergey Ershov; Olaf Skerl (Biotronik SE & Co. KG, DE); Jan Fischer (TU Ilmenau, DE); Michael Lippert; Albrecht Urbaszek (Biotronik SE & Co. KG, DE)*

**L8 Intraoperative Tremor Monitoring Using Smartphones**

*Igor Fischer (University of Duesseldorf, DE)*

**L9 Individual thorax geometry improves EIT image reconstruction**

*Zhanqi Zhao (Furtwangen University, DE); Sven Pulletz; Inéz Frerichs (University Medical Center Schleswig-Holstein, DE); Knut Moeller (Furtwangen University, DE)*

**L10 Automatic segmentation of collapsed lung regions in thorax CT**

*Laurentiu Mirica (Furtwangen University, DE); Sven Pulletz; Inéz Frerichs (University Medical Center Schleswig-Holstein, DE); Vimal Manihani; Zhanqi Zhao; Knut Moeller (Furtwangen University, DE)*

**L11 Hemodynamic Monitoring with an Implantable Pressure Monitor is Improved by Additional Detection of Heart Sounds**

*Albrecht Urbaszek; Jens Kirchner; André van Ooyen; Olaf Skerl (Biotronik SE & Co. KG, DE)*

**Posters****Track M****Magnetic Methods in Medicine**

- M1 The effect of biometric and cardiovascular parameters on the orientation of cardiac magnetic field maps**  
*Peter Van Leeuwen (Grönemeyer Institute of Microtherapy, DE); Gregor Eiling (Philippsstift, Essen, DE); Rifat Konuralp (Grönemeyer Institute of Microtherapy, DE); Birgit Hailer (Philippsstift, DE); Dietrich Grönemeyer (Grönemeyer Institute of Microtherapy, DE)*
- M2 Spatial reconstruction of a magnetic nanoparticle distribution using a single sensor and multiple magnetizing coils**  
*Maik Liebl; Uwe Steinhoff; Frank Wiekhorst; Kay Schwarz; Peter Zirpel; Dirk Gutkelch; Lutz Trahms (Physikalisch-Technische Bundesanstalt, DE); Jens Haueisen (Technical University Ilmenau, DE)*
- M3 A microfluidic chip for size dependent fractionation of magnetic microspheres for magnetic drug targeting**  
*Silvio Dutz (IPHT Jena, DE); Michael Hayden (Simon Fraser University, CA); Allison Schaap; Boris Stoeber; Urs Häfeli (University of British Columbia, CA)*
- M4 Neurovascular intervention with an electromagnetic navigated guidewire**  
*Tomasz Bien; Andreas Brose; Bertram Schmidt; Georg Rose (Otto von Guericke University Magdeburg, DE)*
- M5 Investigation of magnetic nanoparticles incorporated within textile hernia implants**  
*Ioana Slabu; Gernot Güntherodt; Thomas Schmitz-Rode; Nils Krämer; Hank Donker; Jens Otto; Christiane Kuhl; Uwe Klinge; Martin Baumann (RWTH Aachen University, DE)*
- M6 Principal moments of a multipole expansion to quantify the magnetic nanoparticle distributions in arteries**

- O1 **Impact of Antiarrhythmic Drugs on a Virtual Model of Atrial Fibrillation**  
*Mathias Wilhelms; Lukas Holl; Olaf Doessel; Gunnar Seemann (Karlsruhe Institute of Technology (KIT), DE)*

- O2 **Flow regulation in multi branched models of blood vessels**  
*Moritz Ringelstein (TU Berlin & Charité - Universitätsmedizin Berlin, DE); Andre Berthe; Torsten Schneider; Ulrich Kertzscher; Klaus Affeld (Charité - Universitätsmedizin Berlin, DE)*

- O3 **Implementation of Dynamic Plotting for a Ventilation Simulator on Android Mobile Devices**  
*Thomas Lehmann; Thu Nguyen; Knut Moeller (Furtwangen University, DE)*

- O4 **Biomechanical Modelling of Three-Dimensional Scaffold-Free Cartilage Constructs – A Comparison between Experiment and Simulation**  
*Thomas Reuter; Matthias Lange; Igor Ponomarev; Florian Meuche; Sven Wietstock; Martin Hoffmann (fzmb GmbH, DE)*

- O5 **Sensitivity of EEG leads to volume conductor properties**  
*Sven Wagner; Johannes Vorwerk; Lars Ruthotto; Harald Kugel; Martin Burger (University of Münster, DE); Thomas Knösche; Burkhard Maess (MPI Leipzig, DE); Carsten H. Wolters (University of Münster, DE)*

- O6 **Validation and Application of Realistic Head Modelling to MEG**  
*Johannes Vorwerk (University of Münster, DE); Benjamin Lanfer (University of Münster & BESA GmbH, DE); Florian Grüne; Carsten H. Wolters (University of Münster, DE)*

- O7 **Comparison of Boundary Element and Finite Element Approaches to the EEG Forward Problem**  
*Johannes Vorwerk (University of Münster, DE); Maureen Clerc (Ecole Nationale des Ponts et Chaussées, FR); Martin Burger; Carsten H. Wolters (University of Münster, DE)*

- O8 **Enhancements of a mechanical lung simulator for ex vivo measuring of aerosol deposition in lungs**  
*Theresa Steiner; Mathias Forjan; Tamara Kopp (UAS Technikum Wien, AT); Zbynek Bureš (College of Polytechnics Jihlava, CZ); Andreas Drauschke (UAS Technikum Wien, AT)*

- O9 **Development of a Phantom to Modulate the Maternal and Fetal Pulse Curve for Pulse Oximetry Measurements**  
*Steven Weyrich; Sina Sprenger; Marcel Böttrich; Philipp Schmidt; Daniel Laqua; Sebastian Ley; Peter Husar (Ilmenau University of Technology, DE)*

- O10 **Transmission Line Model for Pulse Wave Analysis Accompanied on Experimental Measurements at a Human Model**  
*Eberhard Engelien (University of Duisburg-Essen, DE)*

- O11 **A GPU-accelerated Performance Optimized RAP-MUSIC Algorithm for Real-Time Source Localization**  
*Christoph Dinh (Ilmenau University of Technology & Jena University Hospital, DE); Johannes Rühle (Ilmenau University of Technology, DE); Steffen Bollmann (Kinderspital Zürich, CH); Jens Haueisen (Ilmenau University of Technology, DE); Daniel Güllmar (Jena University Hospital, DE)*

- O12 **Development of a testing method for the determination of interfacial micromotions of short-stemmed hip endoprostheses**  
*Robert Souffrant; Rebecca Schubert (University Rostock, DE); Wolfram Steens (Orthopädisch-Neurochirurgischen Zentrum, DE); Alexander Katzer (Orthoclinic Hamburg, DE); Wolfram Mittelmeier; Rainer Bader (University Rostock, DE)*

- O13 Modelling the Progression of Brain Metastases**  
Stefan Becker; Andreas Mang; Alina Toma; Tina Anne Schütz; Thorsten M. Buzug (Universität zu Lübeck, DE)
- O14 Brain Atlas based Region of Interest Selection for Real-Time Source Localization using K-Means Lead Field Clustering and RAP-MUSIC**  
Christoph Dinh (Ilmenau University of Technology & Jena University Hospital, DE); Daniel Strohmeier; Jens Haueisen (Ilmenau University of Technology, DE); Daniel Güllmar (Jena University Hospital, DE)
- O15 Simulating extracellular microelectrode recordings on cardiac tissue preparations in a bidomain model**  
Matthias W. Keller; Gunnar Seemann; Olaf Doessel (Karlsruhe Institute of Technology (KIT), DE)
- O16 Simulation system for puncture of the Vena jugularis sinistra in horses**  
Gerold Bausch (Leipzig University of Applied Sciences, DE); Uta Delling (University of Leipzig, DE); Antje Schlenker (Leipzig University of Applied Sciences, DE); Jane-Carolin Eichel (University of Leipzig, DE); Werner Korb (Leipzig University of Applied Sciences, DE)
- O17 Adaptive control system for volume-controlled ventilation in small animals**  
Robert Huhle (Technische Universität Dresden, DE); Spieth Peter (University Hospital Dresden, DE); Thea Koch (Technische Universität Dresden, DE); Marcelo Gama de Abreu (University Hospital Dresden, DE)
- O18 Neuromuscular Junction Transmission is Effected by Quantum Entanglement of Ion Transition States**  
Mohammed Mostafizur Rahman; Mufti Mahmud (University of Padova, IT)
- O19 Pressure Pulse Fields: Comparison of optical hydrophone measurements with FEM Simulations**  
Abtin Jamshidi Rad; Friedrich K.W. Ueberle (University of Applied Sciences, Hamburg, DE)
- O20 A curve-shaped flexible mesh cage for treatment of large segmental bone defects - a finite element analysis**  
Jan Wieding; Robert Souffrant; Wolfram Mittelmeier; Rainer Bader (University of Rostock, DE)
- O21 Mechanical properties of the patient circuit and its analogous model**  
Martin Rožánek (Czech Technical University in Prague, CZ)

**Keynote 5****08:30 Strahlentherapie von Krebs mit laserbeschleunigten Ionen – eine Vision**

*Roland Sauerbrey (Helmholtz-Zentrum Dresden-Rossendorf (HZDR), DE)*

Experimente und klinische Studien, die seit den 70er Jahren durchgeführt werden, zeigen die Überlegenheit von Ionen bei der Strahlentherapie von bestimmten Krebsarten. Das Potential von Ionen für die Strahlentherapie insgesamt ist noch nicht vollständig bekannt und derzeit Gegenstand der klinischen Forschung. Für die Ionenbehandlung werden Protonen von etwa 200 MeV Energie bzw. Ionen mit einer Energie von 400 MeV/Nukleon und Strahlendosen von einigen 10 Gray benötigt. Konventionelle Beschleuniger können diese Parameter zur Verfügung stellen. Für ein Behandlungssystem mit Ionen ist jedoch eine sehr aufwändige Apparatur zur Ionenbeschleunigung und Ionenstrahlführung erforderlich, die hohe Investitionskosten verursacht. Am Helmholtz-Zentrum Dresden-Rossendorf (HZDR) wird eine neue Methode zur Beschleunigung von Ionen mit Hochintensitätssläsern verfolgt sowie alternative Technologien zur Ionenstrahlführung untersucht, um kompaktere und preisgünstigere Ionenbestrahlungsplätze zu realisieren. Die gemeinsame Plattform OncoRay der Technischen Universität Dresden, des Uniklinikums Dresden und des HZDR bietet die Möglichkeit der translationalen Krebsforschung auf diesem Zukunftsbereich.

**Keynote 6**

- 11:30 **Optical coherence tomography - from research to routine medical diagnostics**

*Michael Kempe (Carl Zeiss AG Corporate Research & Technology Jena, DE)*

In the field of biomedical optics, Optical Coherence Tomography (OCT) is one of the success stories of transition from research to routine medical diagnostics. This talk will focus on OCT as an interesting case study for successful technologies in the medical field, in particular in ophthalmology.

Despite being a unique solution for the technical problems of imaging into the eye, it took more than 15 years to establish OCT as a routine diagnostic tool in ophthalmology. The presentation will highlight the technical and clinical milestones that drove this development. One of the technical milestones was the transition from time-domain OCT to spectral-domain OCT that enabled substantially more sensitive detection and therefore faster imaging. It makes the acquisition of large 3D volumes within the eye and real-time visualization, e.g. for surgical procedures, possible. The research in OCT for ophthalmology continues to be a highly active field with regard to new technical developments and clinical applications. The introduction of swept-source OCT could be another technology shift leading to even higher imaging speeds. But new technologies do not automatically substitute old ones. The clinical value as the ultimate driver of adoption depends on a number of factors that will be discussed.

OCT has also been recognized as interesting optical technology for other medical applications as well. Substantial research went into establishing OCT as diagnostic modality in e.g. tumor diagnostics (optical biopsy) and cardio-vascular imaging. Being likely one of the most prominent technologies in biomedical optical imaging research, its clinical use remains limited. Catheter-based cardio-vascular imaging has emerged as the next big application of OCT in medicine. As is the case in ophthalmology too, its success as diagnostic tool is linked to the development of novel therapeutic interventions.

### Get-Together

After the formal opening of the conference we would like to welcome you with a selected buffet and drinks from 20:30 h. Participants in the BMT 2012 can conclude the first conference day in a relaxed atmosphere. Participation is included in the conference fee. We hope you enjoy the evening and have interesting talks.

18-09-2012, 19:00 – 20:30 h, Auditorium,  
Friedrich Schiller University Jena (Schloßgasse 1)

### Gala concert of the impulse region on the occasion of the BMT

Recorder and piano music of 5 centuries will be played by "Conventus tibicinus". Participation in the gala concert is free of charge for participants in the BMT 2012.

After the concert, those who are interested may participate in a "**Very special kind of night time city walk**" with Dipl.-Ing. Karl-Heinz Kraass (representative of the impulse region Erfurt-Weimar-Jena-Weimarer Land). The city walk ends directly at the Zeiss-Planetarium, in time for the beginning of the Social Event of the BMT 2012.

**Meeting point:** University main building, entrance - Schloßgasse 1

18-09-2012, 20:30 – 22:30 h, Zeiss-Planetarium Jena,  
Am Planetarium 5, 07743 Jena

### Social evening: Special dinner at Zeiss-Planetarium Jena

Enjoy a unique and unforgettable dinner at Zeiss-Planetarium Jena, the world's oldest planetarium opened in 1926. **Undisturbed by the city lights in the planetarium you can admire glittering and twinkling stars and listen to the mysterious tales about the starry sky.**

As the main speaker we welcome **Mr Matthias Machnig**, Minister of the Thuringian Ministry of Economy, Employment and Technology.

Price: EUR 60,- per person. The reservation can also be made via the registration form. The number of participants is limited to max. 200 people (ticket assignment will be done on a first-come, first-served basis). All conference materials will be handed out to the participants at the conference counter.

## Excursions

## Trade Exhibition

### Visit the scientific Beutenberg Campus

In December 1998 the Beutenberg-Campus Jena e.V. was founded. It provides a platform for the development of innovative strategies and also serves to encourage cooperation among its members. In addition, the association represents the interests of the research establishments and start-up centres. There are nine research institutes on the Campus including the Leibniz-Gemeinschaft, Max-Planck-Gesellschaft, and Fraunhofer-Gesellschaft doing research at state-of-the-art level. The two start-up centres do business under the names of Technologie- und Innovationspark Jena (TIP) and BioInstrumentenzentrum. They host more than fifty small biotechnology companies doing research for marketable products.

The following institutes can be visited:

- Fraunhofer Institute for Applied Optics and Precision Engineering (IOF), Jena
- Institute of Photonic Technology (IPHT), Jena
- BioInstrumentation Centre /BioCentiv GmbH, Jena
- Technology and Innovation Park Jena (TIP)

#### Another highlight:

Visit the Biomagnetic Center (Clinic for Neurology of the University Hospital Jena) under the expert direction of Dr. Huonker, Head of Biomagnetic Center.

Date & Time: 19-09-2012, 15:30 h (90 minutes)

Meeting point: BMT 2012 conference counter  
(foyer, ground floor)

Registration: till 18-09-2012; conference counter

### 17 to 19-09-2012, Foyer, ground floor

The conference is accompanied by a trade exhibition. Present your products, services and research expertise to decision makers at hospitals and from industry at the trade exhibition. Available areas are located on the ground floor and first floor of the Friedrich Schiller University Jena campus building close to the conference rooms, the poster exhibition and the conference secretariat. The conference breaks and the get-together on the evening of 17-09-2012 will also take place in this area.

#### Dates:

Monday, 17-09-2012	08:00 - 22:00 h
Tuesday, 18-09-2012	08:00 - 18:30 h
Wednesday, 19-09-2012	08:00 - 14:45 h

## Klee-Prize 2012

Once again this year, the DGBMT awards the DGBMT prize of the Klee family foundation endowed with EUR 5 000 for the promotion of young scientists. The seven-member jury team from the areas of science and teaching, clinical use and industry represents both the biological-medical and the scientific-technical field of activity of Biomedical Engineering. The jury assessed a total of 9 qualified papers.

The winner of the DGBMT prize of the Klee family foundation in 2012 was:

**Dr.-Ing. Frank Michael Weber**

Karlsruhe University  
with his paper on

**Personalizing Simulations of  
the Human Atria**

The **prize-giving ceremony and the laudatory speech** for the winner will take place on the occasion of the opening event at Friedrich Schiller University Jena, (HS1) on **17-09-2012 at 19:00 h**. The prize will be awarded by Prof. Dr. Olaf Dössel, chairman of the DGBMT prize committee.

## DGBMT Students Competition 2012

The BMT 2012 is taken as an occasion to host the DGBMT student competition.

**This year 21 students have participated.** The best three papers – submitted as posters or oral presentations – will receive certificates and prizes.

The assessment at the conference is based on the following criteria:

- Scientific content of the paper
- Scientific content of the presentation
- Quality of the presentation
- Timing in the presentation
- Demonstration of competence in the discussion.

**Prizes will be as follows:**

**1st prize: EUR 1 000**

**2nd prize: EUR 600**

**3rd prize: EUR 400**

**The announcement of the winners** and the award of certificates takes place at the closing event of the conference **on 19-09-2012 from 14:45 h (HS1)**.

The awards are published after the conference both in the DGBMT members' magazine "Health Technologies" and on the DGBMT homepage.

## Conference Venue Jena

### Welcome to Jena – a city which balances history and high technology

The city of Jena lives on a fascinating combination of its rich historical and intellectual past, its attractive landscape, innovative international research and industry, and its youthful student life. This wealth of different facets creates a unique setting which gives this small, vibrant city its special charm.

### Jena's academic and intellectual development

Since the university, the Alma Mater Jenensis, was founded in 1558, Jena has been one of the most famous places to study in Germany. Thanks to its close connection to the nearby seat of the duchy, Weimar, and support from the poet and minister Goethe, at the end of the 18th century, the city on the Saale enjoyed a Classicist period, in which Jena became the most important intellectual centre in Germany.

### Jena's economic development

In the second half of the 19th century, Jena developed into a city of industry thanks to the work of the three great scientific and industrial thinkers, Carl Zeiss, Otto Schott and Ernst Abbe. Their cooperation resulted in the world-famous Zeiss works and Jena's Schott and Associates glassworks. This effective cooperation between research institutes and the industrial companies has been maintained until today and is the reason behind Jena's outstanding reputation as a high-tech location.

## Directions

### ■ Conference venue

Friedrich Schiller University Jena  
Carl-Zeiss-Straße 3  
07743 Jena

Nothing could be simpler! After all, Jena is in the centre of Germany, giving it very good infrastructural connections in all directions. Whether you come by air, rail or car, you can conveniently take short trips, for example to Berlin (about 270 km away), Dresden (about 170 km) and Leipzig.

#### By car

The north-south and east-west thoroughfares of the A9 Rostock-Munich and A4 Dresden-Eisenach-Frankfurt am Main motorways meet near Jena. Jena itself has three city connections to the A4 Dresden-Eisenach-Frankfurt am Main via the Jena-Zentrum and Jena-Göschwitz junctions. The A9 Berlin-Nuremberg can be accessed via the nearby Hermsdorfer Kreuz junction.

#### By plane

The closest airport is near Erfurt, the state capital of Thuringia, just 70 km away from Jena. The connection via the A4 means it takes 45 minutes to get there by car. It is only another 5 km to the Leipzig-Altenburg airport, and the Leipzig-Halle airport can also be reached in just an hour by car via the A9.

#### By rail

The rail network connects Jena to all European capitals and major cities. The intercity from Munich to Berlin and the interregional Chemnitz-Kassel-Dortmund-Aachen train stop in Jena.

- ICE (intercity express) connection, Hamburg-Berlin-Munich: Jena-Paradies
- Dresden-Erfurt-Frankfurt regional transport: West-Bahnhof

### ■ Gala concert/city walk

Auditorium of the Friedrich Schiller University Jena  
Schloßgasse 1  
07743 Jena

#### By foot

From the conference building (Carl-Zeiss-Str. 3/ city centre) it is only a few minute walk to the gala concert and the start of the city walk (Schlossgasse 1; at the University main building). If you want to use public transport take tram No 1, 4 or 34 from the city centre (direction „Zwätzen“) and get off at the stop „Universität“. Following Saalstraße you will then reach Schlossgasse.

### ■ Planetarium

ZEISS-PLANETARIUM JENA  
Am Planetarium 5  
07743 Jena

#### By car

##### A4 exit Lobeda:

Turn left into B88 („Stadtrodaer Straße“) and follow the road for about 7 km ■ turn left into B7 („Lutherplatz“) ■ turn right at „Bibliotheksplatz“ ■ then straight ahead until you reach the Planetarium

##### A4 exit Göschwitz:

Turn left into „Unter der Kirche“ ■ follow the road on „Rudolstädter Straße“ and „Kahlaische Straße“ ■ at the roundabout take the first exit on „Knebelstraße“ ■ then straight ahead on B88 ■ turn left into B7 („Lutherplatz“) ■ turn right at „Bibliotheksplatz“ ■ then straight ahead until you reach the Planetarium

##### From direction Weimar:
