

KEYNOTE Speaker of ESREF 2016

Wednesday, September 21, 2016 - 11:10-13:50 Session 15: Panel Discussion

Sabine Herlitschka, Chief Executive Officer of Infineon Technologies Austria AG (AT)

"Power and industry electronics - future perspectives for Europe"

The European Union has identified Micro- and Nanoelectronics as one of the key enabling technology of our times. Specific program lines were initiated in order to support research and development activities throughout the entire value chain. "Pilot Line" projects are intended to close the gap between research and commercial availability of technologies for customers. Infineon Technologies with its core competencies in power and industry electronics, together with its partners in academia and industry uses these programmes actively to enable new technologies contributing to providing solutions to societal challenges such as energy efficiency, mobility and security. The presentation will give an overview on respective strategies and activities contributing to a strong knowledge-based Europe in the global competition.
